DHAKA HOME RENT PRICE PREDICTION APP

Department	CSE
Course Code	CSE 4252
Course Title	Data Ware-housing and Data Mining Sessional
Course Credit	3

TABLE OF CONTENT

- Introduction.
- Project Summary.
- How It works?
- Architecture Diagram.
- Hardware & Software specification.
- Pictures of the project's practical demo.
- Future Work.

INTRODUCTION

Problems faced during renting a house:

- It's a stressfull thing.
- Tenant are generally not aware of factors that influence the house rent.
- Hence real estate agents are trusted with the communication between Tenant & Landlord , This just create a middle man and increases the cost.

Project Summary

- Our project is a machine learning app, based on certain specifications of your future home it will try to guess the most accurate price.
- Information such as Location, Bedroom Number, Bathroom Number, Land Size etc.

How It Works

- Collecting Data: First step was to collect data. We collected data from <https://www.bproperty.com> .
- Then preprocess the collecting data.
- After preprocessing the data we trained the model using machine learning algorithm which in this case is linear regression.
- Based on the generated graphs we predict the cost of the house rent.

Architecture Diagram

Specification

Hardware	Software	Libraries
Laptop	Framework –Flask Design- Html, CSS	Numpy,Pandas,Seaborn,Matplotlib
Ram – Min 4 GB	Virtual Environment - Anaconda Navigator	BeautifulSoup,request, csv
HDD – Min 500 GB	Language – Python, Javascript	Scikit-learn
Internet – wifi, broadband	IDE - Spyder, Jupyter Notebook, VS Code	Pickle, Json

Collecting Data

- URL: <https://www.bproperty.com/en/dhaka/properties-for-rent>

BDT 12 Thousand

Tilpapara, Khilgaon, Dhaka

Apartment

Find Your Desired A...

 2  2  700 sqft

```
<span class="f343d9ce" aria-label="Price">12 Thousand</span>
```

```
<div class="d6e81fd0">
  <div class="_6d2ea5a7"></div>
  <div class="cd6d5974 d8b3c34d">...</div> flex
  <div class="_4b74b8bb">
    <div class="_7afabd84" aria-label="Location">Tilpapara,
    Khilgaon, Dhaka</div>
    <div class="_9a4e3964" aria-label="Type">Apartment</div>
    <h2 class="_7f17f34f" aria-label="Title">Find Your Desired
    Apartment At This Ready 700 Sq Ft Flat For Rent At Khilgaon
    </h2>
```

Save Those data in a datahouse.csv file in write mode.

Data Preprocessing

```
df = pd.read_csv('datahouse29.csv')
```

```
df.shape
```

```
(28683, 5)
```

```
df2 = df.drop_duplicates()
```

```
df2.shape
```

```
(15547, 5)
```

```
df.describe()
```

Future Work

The future works of this project include the following:

- We can add more feature in our dataset.
- We can use other advanced regression techniques, like Random Forest and Bayesian Ridge Algorithm.
- Since the data is highly correlated, we should try Elastic Net regression Technique.
